Axeom Challenge: What to send

An update to **Axeom Challenge.pdf**. The task, the data and your deadline have not changed. This page only makes clear what we need from you and how we score it.

> **The short version:** send all 6 items below. Your writeup, assumptions, daily log and video are not extras. They are how we see how you think, and they are worth **35 of the 100 points**. Short on time? Cut from what you build, never from these.

1. Send all of these

	Item	What it is
1	**Live link**	A real link that works on a phone, with no login. Free ways to put it online: Netlify Drop, GitHub Pages, Vercel, or a no-code tool like Glide.
2	**`answers.json`**	The template from your pack, filled in. Put your live link and video link inside it too.
3	**`writeup.md`** (or PDF)	2 pages max: how you found each answer, how your system works, what doesn't work yet, your Jev job, your next 2 weeks.
4	**`assumptions.md`**	The questions you would have asked us, and what you assumed instead.
5	**`daily_log.md`**	Written as you go, not at the end. Use the template below.
6	**Video and transcript**	5 to 10 minutes (Loom is free and makes the transcript). Show your system working, then answer the 3 questions in the brief with no notes and no cuts, camera on.

Strongly recommended: `ai_log.md`. See section 4.

Missing the live link or `answers.json` still means we can't score you. Missing the others costs you the points they carry.

2. How we score (100 points)

What we look at	Where it comes from	Points
Did you find the truth?	`answers.json`, checked against what is really in the data	**40**

Does your system work?	Your live link on a phone, the 10-second test, and new files we upload	**25**
How do you think?	Your writeup, `assumptions.md` and honesty about what doesn't work	**20**
Do you learn fast?	Your Jev job, your daily log and your video	**15**

3. Daily log template

Add an entry each time you stop working. Short is fine. Honest is what counts.

```
## Day 1 (date)
- 10:00 to 13:00. What I did:
- What I changed my mind about, and why:
- What went wrong, and how I fixed it:
- Where the AI was wrong, and how I caught it:
```

4. Using AI

Use any AI you like (ChatGPT, Claude, Gemini, Cursor or others). We expect you to. What we want to see is **how you used it**: what you asked, what you checked, and what you corrected. In `ai_log.md`:

- Which AI tools you used, and for what.
- Share links to your main chats, or paste the key prompts you used.
- At least one time the AI gave you a wrong answer, and how you caught it.

5. How to send it

- One zip or one shared folder link, before your deadline.
- Put your live link and video link in `answers.json` and in your message to us.
- If a link needs a login to open, we can't score it. Check each link in a private browser window before you send.
